

## SN74LS29x Programmable Frequency Dividers and Digital Timers

### 1 Features

- Count Divider Chain
- Digitally Programmable from  $2^2$  to  $2^n$   
( $n = 31$  for SN74LS292,  $n = 15$  for SN74LS294)
- Useable Frequency Range from DC to 30 MHz
- Easily Expandable

### 2 Applications

- Frequency Division
- Digital Timing

### 3 Description

The SN74LS29x devices are programmable frequency dividers and digital timers contain 31 flip-flops plus 30 gates (in SN74LS292) or 15 flip-flops plus 29 gates (in SN74LS294) on a single chip. The count modulo is under digital control of the inputs provided.

Both types feature an active-low  $\overline{\text{CLR}}$  clear input to initialize the state of all flip-flops. To facilitate the incoming inspection, test points are provided (TP1, TP2, and TP3 on the SN74LS292, and TP on the SN74LS294). These test points are not intended to drive system loads. Both types feature two clock inputs; either one may be used for clock gating (see Table 1).

A brief look at the digital timing capabilities of the SN74LS292 shows that with a 1-MHz input frequency, programming for  $2^{10}$  gives a period of 1.024 ms,  $2^{20}$  gives a period of 1.05 sec,  $2^{26}$  gives a period of 1.12 min, and  $2^{31}$  gives a period of 35.79 min.

These devices are easily cascadable, giving limitless possibilities to achievable timing delays.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74LS292N	PDIP (16)	6.35 mm x 19.30 mm
SN74LS294N		

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
V <sub>CC</sub> <sup>(2)</sup> Supply voltage		7	V
Input voltage		7	V
T <sub>J</sub> Junction temperature		150	°C
T <sub>stg</sub> Storage temperature	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Voltage values are with respect to network ground terminal.

### 6.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	NOM	MAX	UNIT
V <sub>CC</sub> Supply voltage	4.75	5	5.25	V
V <sub>IH</sub> High-level input voltage	2			V
V <sub>IL</sub> Low-level input voltage			0.8	V
I <sub>OH</sub> High-level output current (Q only)			–1.2	mA
I <sub>OL</sub> Low-level output current (Q only)			24	mA
f <sub>clock</sub> Clock frequency	0		30	MHz
t <sub>w</sub> Duration of clock input pulse	16			ns
t <sub>w</sub> Duration of clear pulse	SN74LS292	55		ns
	SN74LS294	35		
t <sub>su</sub> Clear inactive-state set-up time	15			ns
T <sub>A</sub> Operating free-air temperature	0		70	°C

## 6.3 Thermal Information

THERMAL METRIC <sup>(1)</sup>		SN74LS292	UNIT
		N (PDIP)	
		16 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	36.8	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	22.2	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	17.0	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	7.0	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	16.8	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.4 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS <sup>(1)</sup>	MIN	TYP <sup>(2)</sup>	MAX	UNIT
V <sub>IK</sub>		V <sub>CC</sub> = MIN, I <sub>I</sub> = –18 mA			–1.5	V
V <sub>OH</sub>	Q	V <sub>CC</sub> = MIN, V <sub>IH</sub> = 2 V, I <sub>OH</sub> = –1.2 mA, V <sub>IL</sub> = MAX	2.4	3.4		V
V <sub>OL</sub>	Q	V <sub>CC</sub> = MIN, V <sub>IH</sub> = 2 V, V <sub>IL</sub> = MAX	I <sub>OL</sub> = 12 mA		0.25	0.4
			I <sub>OL</sub> = 24 mA		0.35	0.5
	TP <sup>(3)</sup>		I <sub>OL</sub> = 0.5 mA		0.25	0.4
I <sub>I</sub>		V <sub>CC</sub> = MAX, V <sub>I</sub> = 7 V			0.1	mA
I <sub>IH</sub>		V <sub>CC</sub> = MAX, V <sub>I</sub> = 2.7 V			20	mA
I <sub>IL</sub>	CLK1, CLK2	V <sub>CC</sub> = MAX, V <sub>I</sub> = 0.4 V			–0.8	mA
	All others	V <sub>CC</sub> = MAX, V <sub>I</sub> = 0.4 V			–0.4	
I <sub>OS</sub> <sup>(4)</sup>	Q	V <sub>CC</sub> = MAX	–30		–130	mA
I <sub>CC</sub>	SN74LS292	V <sub>CC</sub> = MAX, all inputs grounded, all outputs open		40	75	mA
	SN74LS294	V <sub>CC</sub> = MAX, all inputs grounded, all outputs open		30	50	

(1) For conditions shown as MIN or MAX, use the appropriate value specified under [Recommended Operating Conditions](#).

(2) All typical values are at V<sub>CC</sub> = 5 V, T<sub>A</sub> = 25°C.

(3) The TP output or outputs are not intended to drive external loads, but are solely provided for test points.

(4) The duration of the short-circuit should not exceed one second.

## 6.5 Switching Characteristics

V<sub>CC</sub> = 5 V, T<sub>A</sub> = 25°C, R<sub>L</sub> = 667 Ω, C<sub>L</sub> = 45 pF (see [Figure 1](#))

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
f <sub>max</sub>	From CLK1 or 2	30	50		MHz
t <sub>PLH</sub>	From CLK1 or 2, to Q; Modulo set at 2 <sup>2</sup> , A through # = LLLHL (xxxxLS292), A through D = LLHL (xxxxLS294)		55	90	ns
t <sub>PHL</sub>	From CLK1 or 2, to Q; Modulo set at 2 <sup>2</sup> , A through # = LLLHL (xxxxLS292), A through D = LLHL (xxxxLS294)		80	120	ns
	From $\overline{\text{CLR}}$ , to Q		85	130	
			35	65

## 8 Detailed Description

### 8.1 Overview

*Functional Block Diagram* shows that the count modulo is controlled by an X/Y decoder connected to the mode control inputs of several flip-flops. These flip-flops with mode controls each have a D input connected to the parallel clock line, and a T input driven by the preceding stage. The parallel clock frequency is always the input frequency divided by four.

The X/Y decoder output selected by the programming inputs goes low. While a mode control is slow, the D input of that flip-flop is enabled, and the signal from the parallel clock line ( $f_{in} \div 4$ ) is passed to the T input of the following stage. All the other mode controls are high, enabling the T inputs and causing each flip-flop in turn to divide by two.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

This SN74LS29x device can be used to digitally program from  $2^2$  to  $2^n$  ( $n = 31$  for SN74LS292,  $n = 15$  for SN74LS294) divider chain. This has a useable frequency range up to 30 MHz. The flexibility is offered when the devices are cascaded to have desired timing delay.

### 8.4 Device Functional Modes

Table 1, Table 2, and Table 3 list the functional modes of the SN74LS292.

**Table 1. Function Table**

CLEAR	CLK1	CLK2	Q OUTPUT MODE
L	X	X	Cleared to L
H	$\uparrow$	L	Count
H	L	$\uparrow$	Count
H	H	X	Inhibit
H	X	H	Inhibit

Table 2. SN74LS292 Function Table

## 9 Application and Implementation

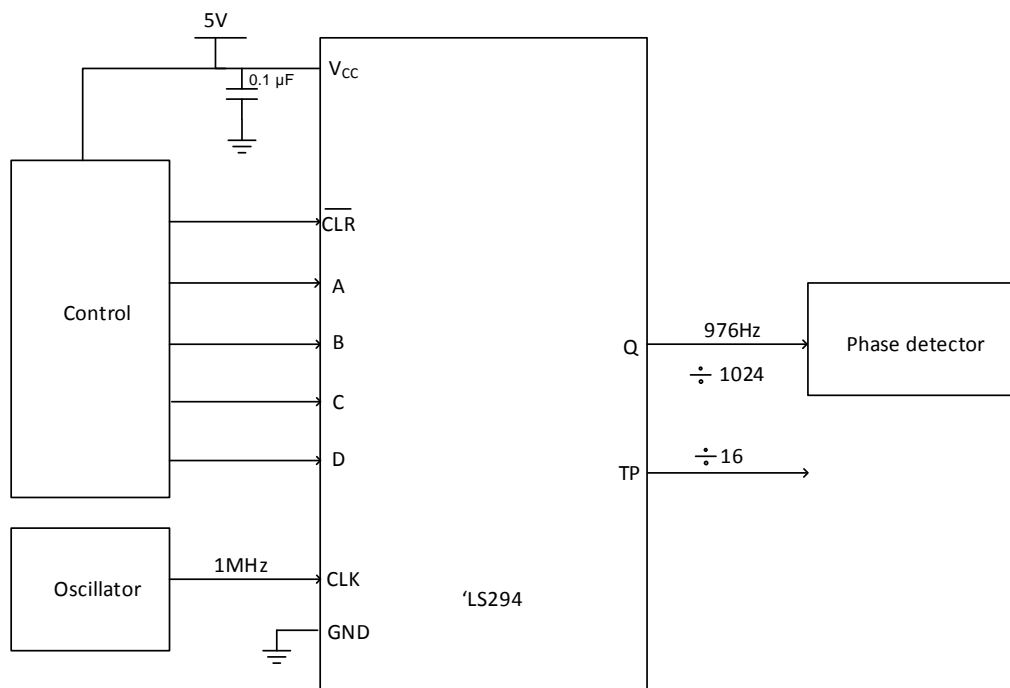

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

This device is used for configurable frequency, programmable frequency, and timing division as shown in [Typical Application](#).

### 9.2 Typical Application

**Figure 10. Typical application**

#### 9.2.1 Design Requirements

This device does not have balanced output drive. Take care to avoid bus contention because it can sink currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions should be considered to prevent ringing.

#### 9.2.2 Detailed Design Procedure

- Recommended Input Conditions:
  - Rise time and fall time specs. See ( $\Delta t/\Delta V$ ) in [Recommended Operating Conditions](#).
  - Specified high and low levels. See ( $V_{IH}$  and  $V_{IL}$ ) in [Recommended Operating Conditions](#).
  - Inputs can go as high as ( $V_I$  max) in [Recommended Operating Conditions](#) at any valid  $V_{CC}$ .
- Recommended Output Conditions:
  - Load currents should not exceed ( $I_{OH}, I_{OL}$ ) per output. These limits are located in the [Recommended Operating Conditions](#).

## Typical Application (continued)

### 9.2.3 Application Curve

**Figure 11.  $V_{OL}$  vs  $I_{OL}$**

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in [Recommended Operating Conditions](#).

Each  $V_{CC}$  pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu$ F capacitor is recommended and, if there are multiple  $V_{CC}$  pins, then a 0.01- $\mu$ F or 0.022- $\mu$ F capacitor is recommended for each power pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu$ F and 1- $\mu$ F capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

## 11 Layout

### 11.1 Layout Guidelines

When using multiple bit logic devices, inputs should not ever float. In many cases, functions or parts of functions of digital logic devices are unused (for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used). Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states.

The following are the rules that must be observed under all circumstances:

- All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating.
- The logic level that must be applied to any particular unused input depends on the function of the device. Generally they are tied to GND or  $V_{CC}$ , whichever make more sense or is more convenient.

### 11.2 Layout Example

**Figure 12. Generic Layout Best Practices**

## 12 Device and Documentation Support

### 12.1 Documentation Support

SN74LS294N	ACTIVE	PDIP	N	16	25	Pb-Free (RoHS)	CU NIPDAU	N / A for Pkg Type	0 to 70	SN74LS294N	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

---

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

20 Pin vendor option

4040049/E 12/2002

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
  - The 20 pin end lead shoulder width is a vendor option, either half or full width.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
